

SolarMax Energy Systems

Fire protection in the energy storage cabin of a photovoltaic power station in Pakistan

Overview

Can a fire department lock out a photovoltaic system?

The fire department must work with the facility personnel or residents to turn off and disconnect any equipment from its energy source before working around it. Here are the lock-out steps for a structure with a photovoltaic system and what to watch for.

Are building related PV systems a fire hazard?

In 2017, a detailed report about fire incidents involving building related PV systems was published by the BRE National Solar Centre. According to this report (BRE 2017a), 58 fire incidents involving building related PV systems were reported since 2010 compared to a total of around 1 million PV systems installed in the UK.

How many fires are involving PV systems in the UK?

According to this report (BRE 2017a), 58 fire incidents involving building related PV systems were reported since 2010 compared to a total of around 1 million PV systems installed in the UK. This is equivalent to 0.0058% of all installed PV systems in the UK.

Are photovoltaic systems dangerous to firefighters?

A joint industry study carried out in Germany (Fraunhofer ISE 2017) concluded that photovoltaic systems do not pose any special threat to firefighters, as long as the firefighters comply with the safety clearances. PV systems can be handled in the same way as any other electrically live equipment.

Do PV systems cause fires?

Similar to the results of Germany (see Chapter 2.1), the analysis of the fire incidents involving building related PV systems for the UK showed that, next to external error sources, most of the errors that lead to a fire incident are due to installation failure on the DC-side of the PV system.

Why is a photovoltaic system dangerous?

During a fire or an explosion, the frame of a photovoltaic system can quickly degrade, exposing hazardous chemicals to direct flame and become dissipated in the smoke plume. This can cause inhalation hazards to the firefighters and surrounding people, animals, and the environment.
