Flywheel energy storage deep discharge price

Overview

Recent data from the U.S. Department of Energy shows commercial-scale systems averaging \$1,500-\$3,000 per kW. But here's the kicker – some utility-scale installations have hit \$800/kW through bulk purchasing, making Tesla's Powerwall blush. Case in point: New York's Beacon Power Plant. What is the cost of Flywheel storage?

The cost of a 25-kWh Flywheel storage system ranges from \$4,015 to \$7,400. The cost of battery storage is from \$3,972 to \$8,700. The efficiency of a Flywheel system is 73 percent compared with 65 percent for a battery system.

What are Flywheel Energy Storage Systems?

Flywheel Energy Storage Systems are interesting solutions for energy storage, featuring advantageous characteristics when compared to other technologies. Research focuses on cost aspects, system reliability, and energy density improvement for these systems. In this context, a novel shaftless outer-rotor layout is proposed.

What is flywheel technology?

Flywheel technology is a method of energy storage that uses the principles of rotational kinetic energy. A flywheel is a mechanical device that stores energy by spinning a rotor at very high speeds.

How much energy does a flywheel store?

It would probably have to be in a cement enclosure, and in Florida a sump pump to keep it dry. A 1,000kg, 5m, 200RPM flywheel would store 685,567J of energy if it was shaped like a disc. That's 0.19kWh of energy — enough to boil the water for about seven (7) cups of tea or run a typical airconditioner for about 10 minutes.

How long does a flywheel last?

This flywheel, when paired to a motor/generator unit, behaves like a battery and energy can be stored for hours and dispatched on demand. The system service life is 20 years, without limits to depth of discharge, charge cycles, or sensitivity to temperature extremes, using recyclable materials.

How does a flywheel work?

The optimized shape spreads centripetal stress evenly throughout the entire flywheel during operation, so all of the material in the flywheel is put to use and the spin speed can be maximized. This flywheel, when paired to a motor/generator unit, behaves like a battery and energy can be stored for hours and dispatched on demand.
