

## SolarMax Energy Systems

# Germany's mobile energy storage solution

## Overview

---

instagrid is a provider of portable battery storage to easily create mobile power infrastructures. Reverion produces highly efficient, reversible, carbon-negative power plants. What is a battery energy storage system?

Currently, most large battery systems (Battery Energy Storage Systems, or BESS) are powered by lithium-ion batteries. Such batteries are favoured especially due to their long life cycle and simple operation. Furthermore, alternative battery technologies are still in development and therefore not yet ready for market launch.

Where is Deutsche Telekom's energy storage system installed?

Deutsche Telekom, Munich The storage system is installed at one of Deutsche Telekom's main offices in Munich, Germany, and its completion was celebrated by senior management from Power & Air Solutions and Pixii. "The current energy challenges in Europe underline the need for investments in energy storage.

Can Germany use solar energy?

However, renewable energies come with a catch: Due to a lack of storage capacity, Germany cannot fully leverage the potential that solar energy offers. During sunny and windy phases, wind and solar park operators have to throttle or even shut down their systems repeatedly to avoid overloading the power grids.

Will Germany add more power storage projects in 2023?

Germany will likely add many more projects in the coming months, as the federal government increasingly focuses on storage solutions. In December 2023, the Federal Ministry for Economic Affairs and Climate Action (BMWK) published its "Power Storage Strategy" to accelerate the development of new capacities.

Why should we invest in solar parks in Germany?

Germany is a country with an increasing amount of renewable energy. BESS are a key technology for this, as the plant in Bavaria shows. Result Through the combination of expertise and suitable solutions, solar parks like the one in Bavaria become a cornerstone of sustainable energy transformation.

What will PASM do with a 300 MWh battery energy storage system?

In total, PASM plans to install battery energy storage systems with a total capacity of more than 300 MWh. This capacity will be used for peak shaving, arbitrage and to maximize the use of renewable energy, as well as to participate in energy markets to contribute to the stability of the German electricity network.
