

SolarMax Energy Systems

Good energy storage operation plan

Overview

What is an energy storage Best Practice Guide?

This Energy Storage Best Practice Guide (Guide or BPGs) covering eight key aspect areas of an energy storage project proposal. Each BPG contains three to seven chapters, and each chapter follows the same format for systematic coverage, and ease of navigation.

What is a good model for energy storage projects?

Best Practice Two programs exist that are good models for energy storage projects:

- NYSERDA Distributed Energy Resources – Integrated Data System: Provides access to project locations, project performance, technology information, and policy information.

What is best practice for energy storage project development?

Best Practice Managing the degradation, and finding the least-cost augmentation schedule, is high on the list for project developers looking to craft a cost-effective capital budget for their energy storage facility.

Degradation.

What insurance do I need for a stand-alone energy storage project?

- General Liability Insurance: This insurance policy is designed to protect the project from a variety of claims including personal injury, property damage, etc. that can occur during the project's operation. This is considered to be an essential insurance policy for any stand-alone energy storage project.

What is a risk management strategy for energy storage systems?

Risk management strategies incorporate understanding and managing the technical design and operational aspects of an energy storage system that can impact the exposure for loss by the different parties involved in the project. Insurance is a means for protecting against financial loss.

How can we improve the economic case for energy storage projects?

A number of challenges exist for improving the economic case for an energy storage project. For instance, determining the proper risk adjustment for the proforma model relies on a clear understanding of technology performance and market rules. Investors continue to be more conservative about revenue streams than developers.
