Ground auxiliary base station emergency communication

Overview

Who needs a ground station authorization?

Ground station authorizations are usually only issued to aviation service organizations located on airports, businesses engaged in pilot training, aircraft manufacturers, or persons engaged in chase activities related to soaring and ballooning.

Is a ground BS antenna suitable for the cmwave frequency range?

The cmWave frequency range, defined from 7 GHz to 15 GHz, potentially strikes a balance capacity and propagation losses, being a promising frequency range for 6G . The ground BS antenna design is clearly central to address-ing these technical challenges. To this end, this paper proposes novel ground BS antenna design for the cmWave range.

Can a 6g antenna be used for direct air-to-ground communications?

Abstract—The sixth generation (6G) of mobile communication networks aims to bring innovations in mobile broadband solutions and airborne communications. This paper proposes an antenna solution for direct air-to-ground (ATG) communications, particularly focusing on the challenges and potential of the digital airspace vision.

What is an Aeronautical Search and rescue station?

Aeronautical search and rescue stations are used for air-to-ground communications during actual or practice search and rescue operations, or for search and rescue training.

When can a radio station be placed in operation?

For aeronautical advisory (Unicom) stations and radionavigation land stations (excluding test stations) only When a new license has been issued or additional operating frequencies have been authorized, the station or frequencies must be placed in operation no later than one year from the date

of the grant.

Ground auxiliary base station emergency communication

A survey on UAV-assisted wireless communications

Moreover, dedicated UAVs could be deployed as aerial base stations (BSs), access points (APs) or relays, to assist terrestrial wireless communications from the sky, leading to ...
