

## SolarMax Energy Systems

# Home communication base station inverter grid-connected battery

## Overview

---

Does HomeGrid offer heated battery modules?

For colder climates, HomeGrid offers the option of heated battery modules in the Stack'd Series system. These heated modules will automatically keep the batteries within operating temperatures to make sure that capacity is maintained, and the batteries' function is optimized, even in the coldest of conditions.

What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

Which HomeGrid battery is best?

From small off-grid cabins, to peak rate TOU (time-of-use) offset, family homes in suburbia, and small commercial projects, the HomeGrid Stack'd Series battery is the proven best choice. For colder climates, HomeGrid offers the option of heated battery modules in the Stack'd Series system.

How does a home inverter work?

When the battery powers your home, the inverter converts the stored DC energy into AC energy for your appliances. Hub: The hub connects to the grid, the inverter, and to your home's electrical system. The hub typically routes energy from the grid to your home, except during outages.

How does a base battery work?

This process is called grid-balancing. Base batteries deploy energy to the grid faster than any other service, which is how Base is able to recoup the cost of the battery equipment and keep prices low for homeowners. The charge level

of your Base battery will naturally fluctuate over time, rising and falling throughout a multi-day cycle.

What is JK inverter BMS?

Provides high compatibility and reliability for various application environments  
Communication Protocols:JK Inverter BMS Compatible with major inverter brands,supporting CAN,RS485,RS232,and UART modes. Easily configurable via mobile app,host computer,or home storage display,ensuring seamless integration with various devices and systems
