

SolarMax Energy Systems

Home energy storage has always used valley electricity

Overview

Are solar and battery storage a viable option for a mature home?

As much as these may sound like the considerations of a commercial fisherman, it's actually the menu of options available to energy mature homes that have invested in both solar and battery storage. According to a recent home energy framework from research firm Habitielligence, these homes are at CORE level 4 - Empowered.

Should you invest in solar & battery storage?

Investing in solar and battery storage has its challenges -- but also some big perks. Follow ZDNET: Add us as a preferred source on Google. Level 4 is the highest level of energy maturity. The most effective cost savers cut their electric bill by four. More than half believe that their home value has increased.

Should you use a home battery during a power outage?

Frustration No. 1: No automated backup power during outages. A home battery on its own provides a finite amount of power output and duration, but when paired with solar generation and supporting energy management tech, it can create a much-needed time extension to a home's operability in the event of an outage.

Do all Level 4 households need a full suite of home energy components?

Not all level 4 households will need, want, or be in a financial position to support a full suite of home energy hardware components (e.g., smart panels, EV chargers), but having the ability to both generate and store power brings a degree of control and flexibility that most households would envy.

Should you upgrade your home's energy system?

As households climb the ladder of energy maturity, though, more of the physical system upgrades are in the rear-view mirror, and the focus then

shifts to the homeowners themselves as the orchestrators of energy efficiency and cost savings. Also: The best home battery and backup systems of 2025: Expert tested.

Will home energy costs rise over the coming years?

Two interesting realities have a tendency to sweeten the pot for those who haven't yet done the mental gymnastics of considering home energy investments. One reality is that most people believe electricity costs will rise over the coming years -- 73% of homeowners, according to Habitelligence research.
