

## SolarMax Energy Systems

# Home solar power generation system connected to the grid

## Overview

---

A grid-tied solar system, also known as a grid-connected or on-grid solar system, is a photovoltaic system that connects directly to the public electricity grid. This connection allows your solar panels to work in harmony with your utility company's power supply, creating a seamless energy solution. What is a grid tied solar system?

Grid-tied systems are solar panel installations that are connected to the utility power grid. With a grid-connected system, a home can use the solar energy produced by its solar panels and electricity that comes from the utility grid. If the solar panels generate more electricity than a home needs, the excess is sent to the grid.

Does connecting solar panels to the grid change how they work?

Connecting solar power systems to the grid doesn't really change how they work. Solar panels still convert sunlight into electricity, which is used to power your home. However, when your home is grid-tied, any short-comings in the solar produced by your panels can be pulled from the grid's electricity pool.

How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

How does a solar on grid system work?

Here's how a Solar On Grid System works, step by step: Sunlight hits the solar panels, generating DC power. The inverter converts DC to AC, which powers your home. Any excess electricity is exported to the grid via the net meter. At night or during low sunlight, you draw electricity from the grid.

What is a utility grid Solar System?

The utility grid refers to the network of power lines and transformers that deliver electricity to homes and businesses in your area. When your solar system produces more electricity than you need, the excess energy flows back into the utility grid. How Does an On-Grid Solar System Work?

.

What is an on-grid Solar System?

Often referred to as a grid-tie or grid-connected system, an on-grid solar system is a system that is connected to the utility grid. It allows your home to use the power generated by your solar panels, as well as the power supplied by the grid. This means even on cloudy days or at night, you will always have a reliable power source.
