

## SolarMax Energy Systems

# How high is the solar panel

## Overview

---

The average height generally ranges from 3 to 5 feet above the ground. However, this can vary based on several factors, including the type of solar panel system, the local environment, and specific installation requirements. How big are solar panels?

Individual solar panels come in a lot of different shapes and sizes, but generally speaking, they're about 3 feet by 5 feet, or about 15 square feet per panel, according to Pamela Frank, vice president of Gabel Associates, an energy consulting firm.

How high should a solar installation be?

If we go with a traditional solar installation, it takes up the entire rooftop space and only gives us a height of 500mm above the ground (it is for cleaning purposes to remove dust and debris). If we choose an elevated design, we will have a clearing distance of 2000 mm (depending on the consumer's needs) from the ground level.

How high should a solar pergola be?

Solar panels are placed at a height of 6 to 8 feet above ground level. With a solar pergola design, the solar panel can be readily installed and the extra benefits of providing outdoor power to decorate gardens and plants may be enjoyed.

Why do solar panels need a higher height?

Increased height also reduces the chances of damage from machinery or debris. Animal Interference: Wildlife can also pose a threat to ground-mounted solar installations. Elevated panels are less accessible to squirrels, deer, cattle, sheep, and other animals, reducing the risk of damage.

What is ground clearance for solar panels?

In the context of ground-mounted solar installations, ground clearance refers

to the vertical distance between the lowest point of the solar panels and the ground. Simply put, it's how high your solar panels are off the ground.

How much space does a rooftop solar system take up?

So a typical, residential rooftop solar system with 25 panels would take up about 375 square feet of roof space, but the size of your specific system will depend on your energy consumption. If you have high energy usage throughout the year, you'll likely end up with more panels, and vice versa.
