# How long can the battery of Huawei s 5G communication base station last

## Overview

---

How long does a 5G smartphone battery last?

5G capable smartphone gives you an extra boost of speed so you can download a movie in seconds, enjoy smooth streaming in ultra clear HD, play games at home and on the go, and even share your 5G speed with friends. The all day battery can last up to 48 hours with Extreme Battery Saver.

Why do cellular base stations have backup batteries?

Abstract: Cellular base stations (BSs) are equipped with backup batteries to obtain the uninterruptible power supply (UPS) and maintain the power supply reliability. While maintaining the reliability, the backup batteries of 5G BSs have some spare capacity over time due to the traffic-sensitive characteristic of 5G BS electricity load.

Do 5G BS batteries have a spare capacity?

While maintaining the reliability, the backup batteries of 5G BSs have some spare capacity over time due to the traffic-sensitive characteristic of 5G BS electricity load. Therefore, the spare capacity is dispatchable and can be used as flexibility resources for power systems.

How much energy does 5G use?

Per bit, 5G consumes a fraction of the energy of 4G. Telecom sites account for the bulk of carriers' energy consumption. In an equipment room, only 60% of the power used is for the main communications equipment, with the remaining 40% used for heat dissipation.

What is a Huawei base station?

Let's dive into a technical explanation. A base station, also known as an eNodeB (for 4G LTE) or gNodeB (for 5G NR) in Huawei's terminology, is a piece of equipment that facilitates wireless communication between user equipment (UE) like smartphones, tablets, and IoT devices, and the core network of the

telecommunications provider.

Does 5G save energy?

5G enables energy savings in other industries. A GSMA report called ' The Enablement Effect ' stated that "mobile technologies had a 1:5 enablement ratio compared to the footprint of the industry in 2015". This means that one kWh of power consumed by mobile networks will lead to a 5-kWh reduction in electricity used by other industries.
