

## SolarMax Energy Systems

# How much does a battery plus inverter cost

## Overview

---

Thinking about adding a battery to your solar panel system?

Learn what you can expect to pay and find out if the benefits outweigh the cost.

If you're looking to buy battery storage for your solar panels, you can probably expect to pay between \$7,000 and \$18,000. Just know that the overall price range for a solar battery is even wider, with prices anywhere from a few hundred dollars to \$30,000+.

Historically, solar batteries have had a reputation for being prohibitively expensive, with many recorded instances where adding storage doubled the cost of a home solar installation. That's one reason why the majority of residential solar panel systems in the.

Solar batteries have become increasingly popular. However, it can be hard to know if a solar battery is right for you, so we put together some guidelines to help you know where you stand. Solar storage may be worth it for you if: 1. You have high electricity costs.

If you're planning to purchase one or more solar batteries, there are a few ways to save money on your purchase further down the road.

A report from the National Renewable Energy Laboratory (NREL) estimates that a solar battery including installation can cost almost \$19,000\* to install, including the price of the battery itself and labor. How much does a solar inverter cost?

If your solar battery system stores DC energy but doesn't come with a built-in inverter, anticipate spending an extra \$1,000 to \$1,500 on an inverter. Most solar batteries need an inverter to convert direct-current (DC) electricity into alternating-current (AC) electricity so that your home appliances can use the electricity.

How much does it cost to install a solar battery?

Labor to install a solar battery costs \$2,000 to \$3,000 on average. Labor costs

are lowest when installing a battery at the same time as a solar panel system. Retrofitting an existing system to add a new battery can increase labor costs by 30% to 50%. Solar battery installation may require additional electrical work:.

How much does it cost to install a solar battery in 2025?

The average cost to install a solar battery in 2025 is between \$9,000 and \$19,000, with the average homeowner paying around \$13,000 on average.

How much does a solar battery backup cost?

Two cabinets can connect to a single inverter for up to 36 kWh total backup power. Whole-house solar battery backup costs \$20,000 to \$32,000 installed, not including solar panels. The average home uses 28 to 30 kWh per day, requiring batteries with at least that total capacity or more to power the entire home for one day.

Should you invest in a solar battery system?

Whether you're ready to take your love of reusable batteries to the next level or make use of that excess solar energy your solar panels generate, investing in a solar battery system is a great way to harness the power of the sun for free electricity. But before you can start saving, you'll need to budget for the cost of a solar battery system.

How much does a home battery system cost?

The cost of home battery systems depends on the battery size or capacity, measured in kilowatt-hours (kWh) and the brand of solar or hybrid inverter used. Average household batteries cost anywhere from \$ 5,000 for a small 5kWh battery (fully installed) to \$15,000 or more for a sizeable 12kWh battery.
