How much does it cost to buy electricity from a power station

Overview

EIA has projections for electricity generation costs in the Annual Energy Outlook. The most recent projections and estimates for different types of power plants are in Levelized cost and levelized avoide.

What is the cost to produce electricity?

The cost to produce electricity includes the money spent to build, operate, fuel, and maintain power plants and to purchase electricity from markets and other generators. Production costs fluctuate, depending on the prices of fuel, capital, labor, and building materials and the type of power plants being built.

How much does electricity cost per kilowatt hour?

On average, in 2011, nuclear power had the lowest electricity production costs at 2.10 cents per kilowatt hour, and petroleum had the highest at 21.56 cents per kilowatt hour.

Why do electricity prices vary across states?

Consider that electricity prices not only vary across states, but also within the same state due to transmission and distribution costs. For example, if you compare Texas electricity plans from the same providers in Dallas-Fort Worth (Oncor service territory) and Houston (CenterPoint service territory), you will notice slight differences.

How much money does a utility spend on electricity?

Utility spending on purchased electricity, which is the largest production cost component, rose 17% to \$66.0 billion in 2021. A utility purchases electricity when it does not own the generators or does not generate enough electricity to fulfill customer demand.

How much does it cost to build a power station in Germany?

Block 5 of Irsching Power Station in Southern Germany uses natural gas as fuel in a combined cycle, converting 1,750 megawatts of thermal energy to 847 net MW of usable electricity. It cost €450 million to build. This works out

to some €531 per kW of capacity.

What are wholesale energy costs?

Depending on the local regulatory environment, some or all wholesale costs may be passed through to consumers. These are costs per unit of energy, typically represented as dollars/megawatt hour (wholesale). The calculations also assist governments in making decisions regarding energy policy.
