How much does the new photovoltaic panels in Brazil cost

Overview

Is rooftop PV a viable option in Brazil?

Rooftop PV accounts for around 70% of the installed PV capacity in Brazil, and as the information about the widening price difference between solar electricity and retail electricity tariffs spreads, more and more residential consumers embark on the rooftop PV option.

Why is PV the second largest contributor to Brazil's electricity mix?

Favorable net metering legislation, rising conventional electricity tariffs, and consistent and strong downward trends in photovoltaic equipment prices in recent years have led PV to become the second largest contributor to Brazil's electricity generation mix.

How many consumer units have a rooftop PV system?

There are 93 million consumer units (potential rooftops) in the country, and so far, fewer than 2.5% of them have a rooftop PV system installed. Through favorable legislation that allows remote self-consumption, there are 3.6 million consumer units enjoying the energy credits produced by these 2.3 million net-metered rooftop PV installations.
