

## SolarMax Energy Systems

# How to choose a battery and inverter

## Overview

---

### How to choose an inverter that has a battery?

Choosing a good inverter that has a battery for your home is a crucial process. To ensure that your battery of the inverter performs optimally and reliably, you need to consider multiple factors.

- Power Needs: Calculate the total wattage of the appliance that you want to be operated on blackout.

### Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

### How much battery does a home inverter need?

For example, if your total power requirement is 170 watts and you need it for 6 hours, a battery capacity of 150 Ah should work well. If you need help determining the right battery, use an inverter battery calculator to find out how much Ah battery is required for a home inverter.

### How to choose a home inverter?

There is no rocket science in selecting the inverter for home. To understand the inverter capacity for home, just list down the appliances you wish to operate on inverter power. Suppose you plan to connect 2 tube lights (60 Watts), 1 fan (70 Watts) and 2 CFLs (40 Watts). In this scenario, your total power requirement will be:.

### Should you buy a tubular battery for a home inverter?

For home use, most people prefer tubular batteries because they have a good service life and are reliable. While buying an inverter with a battery for the home, apart from capacity and battery, check for these features too:

Warranty: A longer warranty is better. It shows the brand's confidence in its product.

How to calculate inverter battery size?

The inverter battery is the heart of your backup system. It decides how long you can run your devices during a power cut. Battery capacity is measured in Ah (Ampere-Hour). The formula to calculate battery size is: Battery Capacity (Ah) = (Inverter VA × Backup Hours) ÷ Battery Voltage Usually, the battery voltage is 12V.
