How to connect the energy storage cabinet and charging pile

LiFePO₄ Battery, safety

Wide temperature: -20~55°C

Modular design, easy to expand

The heating function is optional

Intelligent BMS

Cycle Life: ≥ 6000

Warranty: 10 years

Overview

How to install a charging pile?

Lay the power cord according to the wire diameter requirements, align the pile body with the holes, place it on the cement base, and tighten it with M12X70 bolts. 4. Connect the input cable, and check whether the charging pile has an overcurrent, short circuit, lightning strike, or other protection devices.

How to install charging equipment?

1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room. A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation.

How far should a charging pile be from the charging pile?

A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation. At the same time, try to install the device under a canopy to avoid direct sunlight and rainwater erosion from affecting the life and performance of the device. 2.

Where should a charging pile be located?

1. Charging piles should not be located in places that are dusty or contain flammable, explosive, and corrosive objects. 2. The charging pile should be installed in a ventilated environment, and the ambient temperature should meet the requirements for normal charging of electric vehicles. 3.

What is the grounding resistance of the charging pile protective ground terminal?

4. The grounding resistance of the charging pile protective ground terminal is less than 4Ω . 5. The charger should be installed vertically on the ground plane, and the deviation from the vertical position in any direction should not be greater than 5° . 6.
