

## SolarMax Energy Systems

# How to connect the mobile energy storage site inverter to the grid

## Overview

---

How does a grid tied inverter work?

Your existing system remains unchanged, except that when your utility goes down your grid tied inverter runs power through an added battery-based inverter connected to energy storage (batteries). This new inverter uses power stored in the battery bank to provide electricity to your home when utility power is unavailable. How does AC Coupling work?

.

Can a battery inverter be used in a grid connected PV system?

c power from batteries which are typically charged by renewable energy sources. These inverters are not designed to connect to or to inject power into the electricity grid so they can only be used in a grid connected PV system with BESS when the inverter is connected to dedicated load.

How does an on-grid inverter work?

For an on-grid system, you will not be using batteries. Thus, unlike the off-grid systems, you will connect the inverter directly to the grid. Plug it into the main power switchboard to join the grid, which acts as the input wire. The other wire, which acts as the output wire, connects to the switchboard, which supplies the current.

How do grid-following inverters work?

Traditional “grid-following” inverters require an outside signal from the electrical grid to determine when the switching will occur in order to produce a sine wave that can be injected into the power grid. In these systems, the power from the grid provides a signal that the inverter tries to match.

How to install a solar inverter?

Solar inverter installation varies depending on the type of configuration. Thus,

to connect the grid inverter to the mains, you must choose if it will connect directly to the battery or not. For instance, the on-grid system inverter is connected directly to the mains, while the off-grid inverter output is first connected to a storage battery.

What is a grid-tie inverter?

Correctly configured, a grid-tie inverter allows a home owner to use an alternative power generation system such as solar or wind energy, but without rewiring or batteries. In this situation, a grid-tie inverter, which is actually an AC inverter, allows the solar power generated by the solar panels to convert into useable AC power.
