Huijue inverter grid overvoltage

Overview

What to do if grid-connected inverter shows AC overvoltage problem?

What to do if “Grid-connected inverter shows AC overvoltage problem”. According to the relevant regulations, the PV grid-connected inverter must work within the specified grid voltage range, can be monitored in real time and synchronized with the grid voltage.

What happens if a grid connected inverter is too far away?

If the grid-connected inverter is too far away from the grid connection point, the voltage difference on the AC terminal side of the inverter will increase. When the inverter is connected to the grid-connected voltage range, the inverter will display the grid overvoltage.

Why does my inverter display a grid overvoltage?

When the inverter is connected to the grid-connected voltage range, the inverter will display the grid overvoltage. In addition, the cable used by the inverter to the grid point is too long, too thin, entangled or the material is not in compliance, which will lead to an increase in the voltage difference at the AC terminal of the inverter.

Why does a single phase inverter have a high voltage?

It is often the case that multiple single-phase inverters are connected to the same phase, which can easily lead to grid voltage imbalance, and the grid voltage rises, which naturally causes the grid-connected voltage to be too high.

Why do inverters need to be stopped if grid voltage changes?

This is because the grid voltage is not constant and it will change with the changing of the load and current. At the same time, the output voltage of the inverter will be affected by the grid voltage. When the grid encounters abnormal situation, the inverter power supply shall be stopped to avoid more

serious damage on the grid.

Does PV inverter generate voltage?

In principle, the PV inverter itself does not generate voltage. The voltage displayed by the inverter comes from the PV module, called DC voltage, and the other part comes from the grid called AC voltage. What to do if “Grid-connected inverter shows AC overvoltage problem”.
