Installation of base station battery pack outdoors

Overview

What type of battery does a base station use?

The base station uses a NiMh battery pack to maintain operation during short term power loss. Only replace this pack with the same Telensa type replacement battery pack. The base station unit described in this guide emits radio frequency energy through its antenna.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

How do I install a base station?

The base station must be mounted so that its light sensor is not illuminated by the area lighting or other light source. Remove the white outer cover of the base station. Loosen the hex head M8 bolt located between the two covers of the base station. Lift it up. Slide the base station case up to release it from the keyhole slots on the back plate.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

How do you protect a telecom base station?

Backup power systems in telecom base stations often operate for extended periods, making thermal management critical. Key suggestions include: Cooling System: Install fans or heat sinks inside the battery pack to ensure efficient heat dissipation.

How do I install a back-up battery?

Unscrew so that the screws are threaded into the cover plate, this will make opening the cover easier. Open the cover and plug the back-up battery connector into its white PCB mounted connector at the bottom right of the main PCB. The base station mounting plate must be fixed to the top of the mounting pole.
