

SolarMax Energy Systems

Installed capacity of new grid-connected energy storage

Overview

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity. How much battery storage will be added to the grid in 2025?

The EIA forecasts a record 18.2GW of utility-scale battery storage added to the grid this year. This would be a nearly 8GW growth from the 10.3GW installations achieved in 2024, according to the EIA. Moreover, the combined forecast for solar PV and battery storage puts both technologies contributing to 50.7GW of the total 63GW in 2025.

What is the highest energy storage capacity ever installed in Q1 2024?

HOUSTON/WASHINGTON, June 18, 2024 – The U.S. energy storage market set a first-quarter record for capacity installed in Q1 2024, with 1,265 megawatts (MW) deployed across all segments. This marks the highest storage capacity ever installed in a first quarter in the U.S., representing an 84% increase from Q1 2023.

How many GW of battery energy storage system commissioned last year?

The report also notes that the US commissioned 11.9GW of battery energy storage system (BESS) capacity last year, a 55% increase from the previous year, the fifth consecutive year of record-breaking additions. That is across all segments including grid-scale, commercial & industrial (C&I) and residential.

How big will grid-scale battery storage be by 2050?

The EIA predicts total grid-scale battery storage capacity could double again to 40 GW by the end of next year if the new projects already in the pipeline are completed. It also predicts grid-scale storage batteries will provide about 40% of all the world's short-term electricity needs by 2050.

Which states have the highest energy storage capacity in Q1?

According to Wood Mackenzie and the American Clean Power Association's (ACP) newly released US Energy Storage Monitor report, the grid-scale segment installed 993 MW, producing the highest Q1 on record for the grid-scale segment. Nevada, California, and Texas accounted for 90% of new grid-scale capacity added.

How many GW of solar & battery storage will be added in 2024?

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. Solar. In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year.
