

## SolarMax Energy Systems

**Invest 60 billion in energy storage projects within one year**

## Overview

---

Should storage projects be funded?

One large missing piece has been funding. Storage projects are risky investments: high costs, uncertain returns, and a limited track record. Only smart, large-scale, low-cost financing can lower those risks and clear the way for a clean future.

Why should we invest in energy storage?

The SRM cites the underlying motivation for investment in energy storage as ensuring “that the American people will have the resources needed, when needed.” “1. To facilitate safe, beneficial, and timely deployment of energy storage technologies and accelerate the development of new technologies that address current and emerging consumer needs.

How will energy storage help a net-zero economy by 2050?

Accelerated by DOE initiatives, multiple tax credits under the Bipartisan Infrastructure Law and Inflation Reduction Act, and decarbonization goals across the public and private sectors, energy storage will play a key role in the shift to a net-zero economy by 2050.

Are energy storage technologies the key to reducing energy costs?

Energy storage technologies are also the key to lowering energy costs and integrating more renewable power into our grids, fast. If we can get this right, we can hold on to ever-rising quantities of renewable energy we are already harnessing – from our skies, our seas, and the earth itself. The gap to fill is very wide indeed.

How many new storage projects have been approved in the developing world?

Twelve new projects across the developing world have already been approved, including in Bangladesh, Brazil, Colombia, Haiti, Honduras, India, Indonesia, the Maldives, and Ukraine. In the next three years, CIF plans to

create 1.8 GW of new storage capacity and integrate an additional 16 GW.

Will America supply 100% of energy storage projects with American-made batteries?

The commitment “represents a clear pathway to supplying 100% of U.S. energy storage projects with American-made batteries by 2030,” but depends on a “streamlined permitting environment” and predictable tax and trade policy, ACP said.

## Invest 60 billion in energy storage projects within one year

### U.S. Energy Storage Industry to Invest \$100 Billion in ...

Today's investment commitment aims to advance a manufacturing expansion in the United States that could enable American-made batteries to satisfy 100% of domestic energy storage project ...
