

SolarMax Energy Systems

Irish rural solar power generation system

Overview

Can Irish farmers use solar power?

As the world pivots towards renewable energy, Irish farmers find themselves in a unique position to utilise solar power. With vast roof spaces on their sheds, farmers can now turn these often underutilised expanses into energy-generating assets.

Are farms suited to solar PV in Ireland?

Farms are, in many ways, ideally suited to Solar PV in Ireland. Pig, poultry and robotic dairy farms are particularly energy intensive. With unique access to the space required – either in fallow fields or on shed roofs – farmers could offset or eliminate one of the biggest financial variables they face – high energy costs.

Is Ireland ready for a solar revolution?

Tillage, solar and wind farmer Michael Quirke with his son David on their east Cork farm. Photograph: Daragh Mc Sweeney/Provision Ireland is in the throes of an unlikely solar revolution. Within a relatively short period, solar has become the country's fastest-growing renewable power source.

Should large-scale solar farms be developed in Ireland?

Unlike in the United Kingdom, there are no ministerial guidelines for the development of large-scale solar farms in Ireland. These would set out rules on location, size, density and other conditions. Critics say this has left them at a disadvantage when objecting to projects because of an absence of criteria.

How will solar power impact the Irish energy industry?

Solar power is going to play a huge role in the future of the Irish energy industry, with at least 8GW of capacity to be delivered by 2030 according to current targets. This will come through multiple pipelines, from small scale self-consumption in rooftop solar on homes, farms, and small businesses, right

up to utility scale solar farms.

Could Solar Power Save Ireland's energy?

This saves 202,000 tonnes of carbon annually – equivalent to 1.4 billion kilometres of driving in a fossil-fuelled car. We are at the point where solar could deliver up to 20 per cent of Ireland's electricity at certain hours this summer, "which is incredible", according to energy analyst Dr Paul Deane of UCC.
