Modular design,
unlimited combinations in parallel
BUILT-IN DUAL FIRE PROTECTION MODULE

Overview

Do I need to upgrade or replace my electrical panel?

No matter the age or size of your home, there will eventually come a time when you need to upgrade or replace your electrical panel. Electric Panel upgrades are usually necessary either for safety reasons or because the current panel is no longer sufficient to meet all of the home's electricity needs.

Why should I upgrade my electrical panel?

Upgrading your electrical panel plays a key role in maintaining your home's electrical system safety and efficiency. An electrical panel manages and distributes electricity throughout your house, serving as the central hub for electrical power.

Do I need a power supply upgrade?

If so, a power supply upgrade should also be on your list. Quickly go to [PCPartPicker](#) and find the power requirement for your upgraded build. If the new version of your build doesn't demand significantly more power than the current build, you are good to go.

Can a home electrify without a panel upgrade?

In some cases, this will require upgrading your electrical panel, which determines how much electricity can flow into your home. But with some upfront planning, most homes can electrify without a panel upgrade. Yes, you read that right!.

What is an electrical panel upgrade?

An electrical panel upgrade typically includes new fuse boxes, a circuit breaker, and an update of the amp service from the utility company. This can improve the safety and electrical capacity of your home. What is an electrical panel?

.

Is it time to upgrade your electrical system?

An aging electrical system can be a clear sign that it's time for an upgrade. Electrical panels typically need replacement every 20 to 30 years, depending on the home's age and condition. If your panel is nearing this age range, it might be time to consider replacing it.
