

## SolarMax Energy Systems

**Is photovoltaic power  
generation from solar panels  
mature now**

## Overview

---

Is solar photovoltaics ready for the future?

Solar photovoltaics (PV) is a mature technology ready to contribute to this challenge. Throughout the last decade, a higher capacity of solar PV was installed globally than any other power-generation technology and cumulative capacity at the end of 2019 accounted for more than 600 GW.

Will solar power grow in the future?

The solar power sector is projected to experience significant expansion in the coming years. As solar energy becomes a key component of the global energy mix, there are expectations for increased solar capacity across various regions.

Will solar power grow in 2025?

In our latest Short-Term Energy Outlook, we forecast that wind and solar energy will lead growth in U.S. power generation for the next two years. As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in 2025.

How much energy will solar PV produce a year?

Keeping a 50% annual growth for 9 additional years would mean producing ~34,000 TWh (more than the global electricity demand in 2019, which accounted for ~27,000TWh 2). This highlights the large potential for solar PV expansion.

Are solar panels becoming a major player in electricity generation?

The sight of solar panels installed on rooftops and large energy farms has become commonplace in many regions around the world. Even in grey and rainy UK, solar power is becoming a major player in electricity generation. This surge in solar is fuelled by two key developments.

Is solar PV the future of low-carbon energy?

Throughout the last decade, a higher capacity of solar PV was installed globally than any other power-generation technology and cumulative capacity at the end of 2019 accounted for more than 600 GW. However, many future low-carbon energy scenarios have failed to identify the potential of this technology.

## Is photovoltaic power generation from solar panels mature now
