

SolarMax Energy Systems

**It is now profitable to install
photovoltaic panels on rooftops**

Overview

Is rooftop solar a good idea?

With solar panels coming down in price, it seems like rooftop solar could be a good opportunity for homeowners to save on electricity bills and cut their carbon emissions. But incentives and policies that encourage or discourage solar vary widely across Canada.

Do rooftop solar panels produce more energy than solar farms?

The study found that rooftop solar systems generate 18 to 59 per cent fewer carbon emissions than solar farms per kilowatt during production and installation. Both Pearce and McDiarmid found solar panels generate more energy than were used to produce them in less than two years, even in Canada.

Do rooftop solar panels save money?

While rooftop solar systems cost more per kilowatt than utility-scale systems, in many areas of the country they offer households an opportunity to save money on electricity costs. Additional research in solar panel design, energy yield, grid integration, and permitting could reduce costs and enable greater savings for consumers.

Does a rooftop solar system increase home value?

Like a renovated kitchen or a finished basement, a rooftop solar system can increase home valuation and reduce a home's time on the market. Furthermore, pairing a roof replacement with solar installation can save homeowners about \$4,000.

Are solar panels a good investment?

Homeowners can save or break even on their solar panel investment due to several benefits that solar panels provide. To start, solar panels save money on electricity. Not only does generating your own solar power reduce your

utility bill by an average of \$125 per month, but you may even get paid for any excess energy your system produces.

How much does it cost to install solar panels?

The national average cost to install solar panels is about \$16,000. That cost can range between \$4,500 and \$36,000 and ultimately depends on factors like the solar panel type and model you choose and the incentives you apply after installation. In some areas, you'll be required to obtain certain permits to install solar panels.
