Kiribati Communications 30 000 5G base stations

Overview

Is Kiribati a good place to build a telecommunications network?

Kiribati presents a challenging geography for telecommunications network deployments. Traditional network architecture is unsuitable for Kiribati, as the islands are only connected to each other and to the rest of the world via satellite.

Does Kiribati need a satellite network?

Some of the inhabited islands still require access to satellite networks and generally speaking fibre-optic infrastructure is unsuitable and too expensive. The Pacific region as a whole is heavily reliant on mobile technologies for its communication services and Kiribati is no exception.

Will Kiribati benefit from competition in the mobile sector?

Kiribati may also benefit from the introduction of competition in the mobile sector in the near future. In September 2015 the Government of Kiribati and the Communications Commission of Kiribati (CCK) launched a tender for a second mobile license which would be offered under a 15-year renewable term.
