

SolarMax Energy Systems

Korean solar energy intelligent control system

Overview

The government announced its CO₂ reduction target for 2020. The target represents a 30% reduction from the estimated level of 2020. This goal is deemed very challenging since Korean industry had doubled its greenhouse gas emissions between 1990 and 2005, the fastest growth in the OECD. Korea has voluntarily set its 2020 emission reduction target. With this pledge, Seoul seeks to be a model for other countries including China and India who are category.

Does South Korea have a smart grid?

In comparison to Germany, South Korea pursues a different strategy with regard to integration of renewables: rather than expanding the transmission grid, it bets on smart (micro)grids where renewable power is generated, traded, saved, used and managed, acting as an intermediary between power generation, transmission and use.

How many power IT projects are there in Korea?

There are ten Power IT Project Areas: Korea Smart Grid Institute (KSGI) was launched in August 2009 as the secretariat of Smart Grid Initiative and projects in Korea. The Smart Grid Initiative mainly targets the modernization of electric power systems.

What is Korea's strategy regarding renewables integration?

Korea's strategy regarding renewables integration is pragmatic and business-oriented like in Taiwan, China or Japan. Korea aims to pursue IT-enabling of its power grid with a modular approach to smart grid construction.

What is the power system voltage in Korea?

Korea's power system voltage levels are relatively high at 765kV, 345kV, 154kV and 22.9kV. This contributes to reliability of the power system and reduces the transmission losses. In 2016, Korea's transmission-to-loss ratio was only 3.59%.

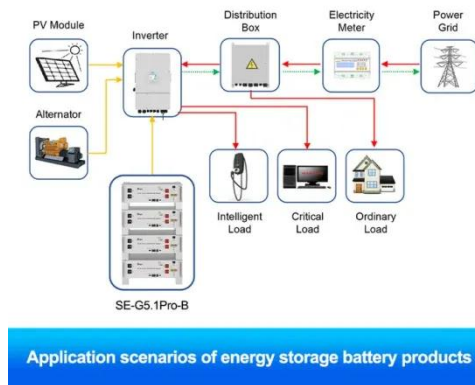

How much solar PV is not connected to the grid in Korea?

In March 2019, the president of Korea's New and Renewable Energy Center stated that more than 5GW of solar PV is still not connected to the grid – this would represent roughly half of the total PV generation capacity in Korea (Korea Energy Agency 2019, PV Magazine 2019). A further set of challenges are structural.

Are smart grids relevant in the German-Korean energy policy dialogue?

In the context of the German-Korean Energy Policy Dialogue, integration of renewable power sources and smart grids have been identified as topics with high relevance.

Korean solar energy intelligent control system

South Korea Intelligent Microgrid System Controller Market Size ...

The South Korea Intelligent Microgrid System Controller market is undergoing rapid transformation, driven by technological innovation, shifting consumer behaviors, and ...
