

## SolarMax Energy Systems

# Liberia energy storage lead-acid battery

## Overview

---

Are lead-acid batteries a good choice for energy storage?

Lead-acid batteries have been used for energy storage in utility applications for many years but it has only been in recent years that the demand for battery energy storage has increased.

What is a lead acid battery?

Lead-acid batteries may be flooded or sealed valve-regulated (VRLA) types and the grids may be in the form of flat pasted plates or tubular plates. The various constructions have different technical performance and can be adapted to particular duty cycles. Batteries with tubular plates offer long deep cycle lives.

What is a bipolar lead-acid battery?

Note (1): Bipolar lead-acid batteries are being developed which have energy densities in the range from 55 to 60 Wh/kg (120–130 Wh/l) and power densities of up to 1100 W/kg (2000 W/l). J. Electr.

What are the different types of lead-acid batteries?

The lead-acid batteries are both tubular types, one flooded with lead-plated expanded copper mesh negative grids and the other a VRLA battery with gelled electrolyte. The flooded battery has a power capability of 1.2 MW and a capacity of 1.4 MWh and the VRLA battery a power capability of 0.8 MW and a capacity of 0.8 MWh.

Are Li-ion batteries better than lead batteries?

Li-ion batteries have advantages in terms of energy density and specific energy but this is less important for static installations. The other technical features of Li-ion and other types of battery are discussed in relation to lead batteries.

What is the difference between lithium ion batteries and lead-acid batteries?

Similar differences are evident for the greenhouse gas emissions (CO<sub>2</sub>) in that the quantity released in lead-acid battery manufacture is 3 kg/kg whereas it is 12 kg/kg for Li-ion batteries.
