

## SolarMax Energy Systems

# Liquid cooled energy storage costs in Spain

## Overview

---

Namely, from 43 €/MWh (lower case) to 52.5 €/MWh and from 47 €/MWh (high case) to 56.5 €/MWh. This is comparable with the 67 €/MWh LCOH for the TES with retail charges. In Spain, subsidies for storage will be granted through four calls under the PERTE ERHA1 scheme. Why do we need energy storage systems in Spain?

Energy storage systems in Spain are a key element in the fight against climate change, as they help us to address the challenge of the energy transition. These systems make renewable energy production more flexible; and therefore help us to guarantee its integration into the Spanish electricity system.

How much does a LCoH cost in Spain?

This is comparable with the 67 €/MWh LCOH for the TES with retail charges. In Spain, subsidies for storage will be granted through four calls under the PERTE ERHA1 scheme. The PERTE ERHA includes storage, renewables and hydrogen and it is funded by the European Union.

How much energy storage will Spain have in 2024 - 2043?

Aim to ensure the effective deployment of energy storage. Spanish storage capacity from the current 8.3 GW, to 20 GW in 2030 and 30 GW in 2050. The PNIEC scenario for the hourly pool price projection calculation for the 2024 - 2043 horizon has been carried out by the Advisor based on PNIEC objectives using the software xPryce®.

How does Spain's pumped hydro energy storage compete with Bess?

Spain's pumped hydro energy storage competes directly against BESS, limiting the battery storage opportunity in wholesale markets. 3. Missing ancillary markets Unlike Great Britain or Texas, Spain never created ancillary service markets that net-zero systems need:.

Which country has the most energy storage systems in Europe?

With more than 20,000 megawatts, Spain is the country with the largest number of energy storage systems in Europe measured by power, and has the second largest number of projects: 128 in total; second only to Germany's 169.

What happens if solar prices go down in Spain?

When German prices reach -€150/MWh, Spain can't import enough energy to bring the price down. Economic curtailment: Most Spanish solar installations are large commercial projects with remote control capabilities. When prices become negative, solar operators stop generating.
