

SolarMax Energy Systems

Lithium battery outdoor power supply production

Overview

Where are lithium-ion batteries found?

According to the California Energy Commission, the Salton Sea region (pictured above) contains the fifth largest lithium deposit in the world. As the world pivots towards electrification, the demand for lithium-ion batteries is set to skyrocket.

Will lithium-ion battery demand skyrocket in 2022?

As the world pivots towards electrification, the demand for lithium-ion batteries is set to skyrocket. According to McKinsey, battery demand is expected to increase nearly sevenfold, from approximately 700 GWh in 2022 to about 4,700 GWh by 2030.

Is lithium a good battery?

Lithium is a key component in the global energy transition, boasting the highest energy density for a solid material, and making it the optimal choice for batteries. Since the introduction of the lithium-ion battery in 1991, its use has expanded exponentially, doubling every two to three years.

Why is the supply of lithium so low?

This surge is driven by the growing adoption of electric vehicles (EVs), utility-scale grid storage, and portable electronics. However, the supply of raw lithium is struggling to keep pace, and production is expected to fall short of projected annual demand of 3 million tons by 2030.

Where can lithium be extracted?

The highest concentration sources are being mined first, but many new reserves, such as the Smackover Formation in Arkansas or the Salton Sea in California, are low-concentration brines or geothermal fluids. As a result, the industry is turning to innovative methods to extract lithium from these non-traditional sources.

Where is lithium mined?

Lithium is mined worldwide from hard rock deposits and from underground brines. The highest concentration sources are being mined first, but many new reserves, such as the Smackover Formation in Arkansas or the Salton Sea in California, are low-concentration brines or geothermal fluids.

Lithium battery outdoor power supply production

Bavaria promotes battery development at MAN

Large-scale production will start at the beginning of 2025. Until then, the battery systems will be manufactured manually in small series - also ...
