Lithium battery pack inspection cycle times

Overview

What are the test items for incoming inspection of lithium-ion battery cells?

Through the tests of the automatic battery sorter and the battery cycler, the main core test items for the incoming inspection of lithium-ion battery cells have been completed. The remaining items are mainly inspected and sampled manually, such as size inspection and appearance inspection.

What is battery module and Pack testing?

Battery module and pack testing involves very little testing of the internal chemical reactions of the individual cells. Module and pack tests typically evaluate the overall battery performance, safety, battery management systems (BMS), cooling systems, and internal heating characteristics.

How is a lithium ion battery inspected?

The remaining items are mainly inspected and sampled manually, such as size inspection and appearance inspection. The size of lithium-ion battery cells is generally measured with a vernier caliper.

How long does it take to test a battery pack?

There is significantly less time available to test during production due to high throughput. Typically the system validation done on the pack level can easily take upwards of 6 minutes per unit. For example, an EV battery manufacturer may plan to manufacture up to 40,000 or more battery packs a year.

Should you test 18650 & 21700 lithium-ion cells before assembling a battery pack?

Testing individual 18650 and 21700 lithium-ion cells before assembling them into a battery pack is crucial for ensuring optimal performance, safety, and longevity of your final product. This comprehensive guide will walk you through the essential steps and techniques for thoroughly evaluating these popular cylindrical cell formats.

What is a battery incoming inspection?

In this process, the actual capacity of the battery cells can also be tested, and the battery cell incoming inspection standards can be compared to determine whether the capacity and cycle life of the battery cells meet the technical and quality requirements.
