

**SolarMax Energy Systems**

# **Lithium battery station cabinet automation production company**

## Overview

---

What is a lithium-ion battery?

Lithium-ion battery solutions for transportation, heavy equipment, and energy storage. Forward Thinking. Microvast produces innovative and reliable lithium-ion batteries with advanced technologies.

How are lithium-ion cells assembled?

In this process step, lithium-ion cells are assembled into modules and connected in series or in parallel. KUKA supplies the turnkey system and keeps an eye on everything: In addition to optimal handling and welding solutions, adhesive bonding, pressing and electrical and thermal contacting are relevant key processes here.

Are low-cost lithium-ion battery cells the key to mass electromobility?

Low-cost lithium-ion battery cells (LIB) are the key to mass electromobility, although the manufacturing process has always been a cost driver – until now. Researchers at TU Berlin are using continuous Z-folding to replace the traditional pick-and-place movements that have been used so far, thereby accelerating battery cell production.

How KUKA robots are used in the production of lithium-ion battery cells?

In the production of lithium-ion battery cells, special high-precision machines are used for individual production steps. KUKA robots can take over certain key processes such as stacking, loading and unloading, or formation and aging of cells.

Why do we need automation in battery production?

Demand for lithium-ion batteries is booming. From smartphones and tablets to e-cars: nothing runs without batteries. Accordingly, the required quantities in battery production are increasing rapidly. The solution lies in automation. This is because the manufacture of batteries is technically demanding and requires

high safety standards.

How can a PC-based automation platform improve battery cell winding efficiency?

Our approach involves the use of a central PC-based automation platform to achieve maximum process efficiency in battery cell winding, as this allows vision systems, motion tasks, and communication to I/Os to all be controlled with a high level of synchronicity. It also enables precise winding accuracy while maintaining high output.

## Lithium battery station cabinet automation production company

---

### Battery production equipment and services

Battery excellence for all manufacturing processes The increasing demand for clean energy is driving substantial growth in the battery industry. The advanced technology offered by Dürr in ...
