

## **SolarMax Energy Systems**

# **Lithuania Communications Green Base Station Module**

#### **Overview**

In 2022, among individuals in Lithuania reached 87%, just below the EU average of 89%. The country has made progress in enhancing digital skills but still encounters hurdles in achieving the Digital Decade targets set for 2030. As of 2022, 49% of the population had attained at least basic digital skills, slightly under the EU average of 54%, and the proportion of individuals with above-basic digital skills was 23%, marginally lower than the EU benchmark of 26%.

What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

What is Telecommunications in Lithuania?

Telecommunications in Lithuania include internet, radio, television, and telephony. The Communications Regulatory Authority of the Republic of Lithuania (RRT) functions as the independent regulator for the country's electronic communications industry.

Does Lithuania use e-government services?

In 2022, Lithuania's usage of e-government services by internet users reached 83%, exceeding the EU average of 74%. The nation's digital public services for citizens and businesses scored 84 and 94 out of 100, respectively, surpassing the EU averages of 77 and 84. Mobile friendliness in Lithuania was rated at 97 out of 100.

What is a green communication initiative?

The green communication initiative primarily aims to improve the energy efficiency, reduce the OPEX, and eliminate the GHG emissions of BSs to guarantee their future evolution [2, 3]. Cellular network operators attempt to shift toward green practices using two main approaches.

Why does a base station have low power utilization?

In a base station, the number of carriers is usually configured according to peak hour traffic. As a result, in idle hours, the power of some carriers is used in control channels rather than in traffic channels, leading to very low power utilization.

### Lithuania Communications Green Base Station Module

## Comba Telecom Releases 4G/5G (8TR) Green Integrated Base Station ...

To support the low-carbon deployment of 5G networks, Comba Telecom has launched a high-end 4G/5G (8TR) integrated Base Station Antenna (BSA), which meets the capacity and coverage
