

SolarMax Energy Systems

Madagascar s new outdoor power supply

Overview

Is decentralised solar power a cost-effective way to power Madagascar?

A costly expansion of the national electricity grid is a long way off and not the most cost-effective way either. Madagascar is one of the sunniest countries in the world with more than 3,000 hours of sunshine per year, so decentralised solar power supply to rural areas is not only easier but also cheaper.

Does Madagascar have a power supply at night?

Lithium-ion batteries also provide power at night. Madagascar is the largest island state in Africa and the fourth largest island in the world. With the equivalent of 440 US dollars a year¹, the annual gross national income per capita is far below the average of the other African states south of the Sahara.

Why do Madagascans need more electricity?

Many Madagascans have to walk for miles to recharge their mobile phones. Moreover, electricity also means more production and better food and health care. An expansion of the energy supply is therefore urgently needed, but the national budget is burdened by high subsidies for the country's largest electricity supplier.

How can The GoM lift Madagascar out of poverty?

Access to energy is a cornerstone of the GOM's efforts to lift Madagascar out of poverty. The objective is to double energy production within 5 years, increase access to electricity for at least 70 percent of the population by 2030, improve reliability of supply, and reduce energy prices.

How much money does Madagascans make a year?

With the equivalent of 440 US dollars a year¹, the annual gross national income per capita is far below the average of the other African states south of the Sahara. Only about 15% of the Madagascan have an electricity

connection, in the rural areas less than one out of ten persons 2.
