

SolarMax Energy Systems

Maldives Solar System

Overview

What is the Maldives solar project?

The Maldives solar project is a 36 MW solar power project and 50 MWh of battery energy storage solutions development across various islands in the Maldives. It also includes grid modernization for the integration of variable renewable energy with the grid, which will be financed under the proposed AIIB loan.

Will a 5 MW solar installation make Maldives a popular destination?

Now, one of the first sights for any of the 1.7 million tourists visiting the Maldives will be that of the 5 MW solar installation on the highway linking the airport island to Male and its satellite town of Hulhumale.

Why solar PV with storage in Maldives?

Solar PV with storage has proven suitable and competitive for Maldives' high penetration of renewable energy (POISED type B projects), with an average fuel savings of 25%. The concept design of hybrid systems (efficient diesel generators + solar PV plants + energy storage) has resulted in success for Maldives.

How much solar energy does the Maldives receive?

Maldives, located in the Equator, receives abundant solar energy. Specifically, it receives about 400 Million MW of solar energy per annum.

Is Maldives ready for hybrid solar PV-diesel?

Maldives aims to transform the energy systems of at least 160 islands from diesel-based to hybrid solar PV-diesel systems through the Preparing Outer Islands for Sustainable Energy Development (POISED) project, which was established in 2014 with the support of the Asian Development Bank (ADB). The project focuses on the implementation of hybrid solar PV-diesel systems.

Is there electricity in the Maldives?

The Maldives has achieved 100% access to electricity for its entire population, including those living on outer islands. However, each island is electrified with its own diesel-powered grid system, leading to expensive and not very reliable electricity supply.

Maldives Solar System

Visit Maldives

The first floating solar system to be installed in the ocean surrounding the archipelago's Fari Campus. The installation comprises of 40 platforms and 2,160 PV panels. It ...
