

## SolarMax Energy Systems

**Mobile power box should be  
corrosion-resistant**

## Overview

---

Are portable power distribution boxes safe?

If power is needed across a long distance or within the hard-to-reach areas, portable power distribution boxes are a convenient, safe, and affordable solution. Portable power distribution boxes are built to last, allowing you to run electricity to power tools, lighting, and other electrical devices – wherever and whenever you want.

Are power distribution boxes UL certified?

Power distribution boxes also need to be resistant to shock, impact, and corrosion due to the possible exposure to harsh environments and frequent relocation. UL-certified power distribution boxes are built in either an impact-resistant, injection-molded, weatherproof, rubber enclosure or powder-coated aluminum enclosure.

What are UL-certified power distribution boxes?

UL-certified power distribution boxes are built in either an impact-resistant, injection-molded, weatherproof, rubber enclosure or powder-coated aluminum enclosure. The latter can be mounted on stainless steel legs or in a stainless steel frame with wheels.

What is a small power distribution box?

These small power distribution boxes often have a handle attached for easy carrying and legs that allow additional power distribution boxes to be stacked on top of one another. The aluminum legs are also great for keeping the electrical components above ground level to achieve NEC regulatory compliance.

What makes a good portable power device?

Quality portable power devices should feature a vulcanized rubber enclosure and self-closing, waterproof lid. Boxes should be able to efficiently distribute

power while withstanding extreme conditions that may affect an outdoor project like lingering rain or floodwaters after a hurricane has just passed through an area.

## Mobile power box should be corrosion-resistant

---

### Mobile power source box with high corrosion resistance

A corrosion-resistant and mobile technology, applied in the field of power boxes, can solve the problems of poor protection of the power port, easy external damage to the power port, and ...
