

SolarMax Energy Systems

Multi-level current protection method for lithium battery pack

Overview

What type of batteries does this protection circuit apply to?

This protection circuit is generally used for rechargeable lithium batteries and where there will be multiple cells within the battery pack. Protection circuits embedded into battery packs provide full-time protection that is active throughout the lifecycle of the battery.

Can this protection circuit module be used with non-lithium batteries?

This protection circuit module can also function using non-lithium battery chemistries that do not require a protection circuit when in use or when discharging. Some advantages with having the protection circuit module in the battery charger is that only one protection circuit module will be required, and it can reduce costs when using multiple batteries.

Why do you need a battery protection IC?

That is why we design our battery protection ICs to detect a variety of fault conditions including overvoltage, undervoltage, discharge overcurrent and short circuit in single-cell and multi-cell batteries, so you can enhance the safety of your battery pack.

How hard is it to protect a lithium-ion battery?

Protecting Your Lithium-Ion Batteries Isn't So Hard. Sponsored by: Texas Instruments Safety is a primary concern when using lithium-battery technology—here's one approach to implementing the level of protection needed in battery packs for portables.

What are lithium-ion and lithium-polymer batteries?

Lithium-ion and lithium-polymer batteries are increasingly finding their way into portable and mobile devices. These highly efficient battery technologies pack more energy into a smaller size than almost any other battery type.

What is a protection circuit?

A protection circuit is a component embedded into battery packs that provides full-time protection throughout the lifecycle of the battery.

Multi-level current protection method for lithium battery pack

Battery Protection ICs for Multi-cell Pack

Battery protection ICs protect batteries from hazards such as overcharging, overdischarging and overcurrent. ABLIC has been developing and producing battery protection ICs since 1993, and ...
