Myanmar energy storage container power station factory is running

Overview

How has Myanmar's energy infrastructure changed over the years?

The country's energy infrastructure expanded with foreign direct investment (FDI) support and progressive government policies like the Myanmar Sustainable Development Plan 2018-2030. The total installed power capacity grew from 5,125 MW to 6,830 MW, while power output increased from 15,965 GWh to 23,643 GWh annually.

How can Myanmar improve its energy policy?

Expanding renewable energy sources, particularly solar, wind, and hydropower, is crucial for reducing the nation's dependency on gas and mitigating future power shortages. Moreover, Myanmar's energy policy must be reformed to attract foreign investment and improve governance.

Why is there a power shortage in Myanmar?

Addressing Energy Shortages in Myanmar The recent temporary shortage of power was caused by a surge in global liquefied natural gas (LNG) prices, exacerbated by the Russia-Ukraine conflict, a weaker kyat currency as well as terrorist actions linked to the People's Defence Force (PDF).

Why is Myanmar planning a high-priority energy project?

Myanmar Government is also proposing to include this high-priority energy project – with an estimated investment value of USD 2.5 billion – in the list of early harvest projects of the China-Myanmar Economic Corridor (CMEC) to enhance bilateral cooperation so as to accelerate its progress. (v) Increase investments in renewable energy.

Does Myanmar have a power supply gap?

Myanmar's power sector will likely continue to experience significant challenges. To sustain the current level of power supply would require adding 300-500 MW every year until 2030. Scenario analysis on the power

supply-demand gap illustrates that available generating capacity is projected to not meet the growing demand.

What challenges does Myanmar face in a power crisis?

In a crisis, Myanmar's energy sector faces widespread disruptions affecting all primary power sources. As demand outpaces supply, the country's energy infrastructure faces mounting challenges. Let's take a closer look at the current state of power resources.
