

SolarMax Energy Systems

Nauru outdoor power supply trading market

Overview

How is Nauru moving in the energy sector?

In the energy sector, Nauru is moving along in a process of shifting from what amounted to a system of free electricity to tariffs that recover the real cost of power.

Does Nauru have a power supply?

Nauru's power supply was provided by diesel-powered generators maintained by the Nauru Phosphate Corporation, however, since its dismantling and government restructuring, the Nauru Utilities Authority (NAU) has taken over responsibility for the power supply.

How much does energy recovery cost in Nauru?

Full cost recovery is estimated to be between 0.45 and 0.49 AUD per kWh. Due to the major structural changes taking place in the Nauru economy in particular the reopening of the Regional Processing Centre (RPC), accuracy is very low for forecasting future energy use. In 2012, SPC released 36 energy security indicators for Nauru.

How accurate is Nauru energy forecasting?

Due to the major structural changes taking place in the Nauru economy, particularly the reopening/expansion of the RPC, accuracy is very low for forecasting future energy use.

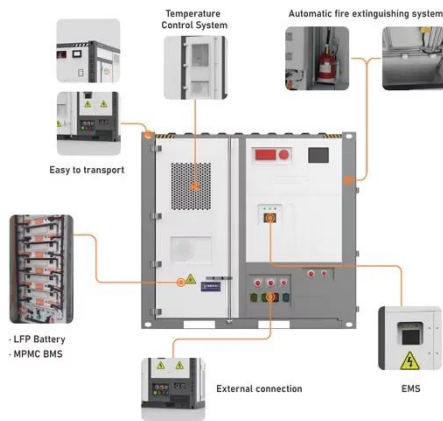

Does Nauru have a solar resource monitoring programme?

There is currently collection of some solar resource data on Nauru. However, after the first year of installation, the wind resource monitoring equipment was damaged and the reliability of the data it is collecting is questionable. There are no other resource monitoring programmes currently underway.

What are the demand-side activities in Nauru?

From 2007 to 2010 various demand-side activities were undertaken in Nauru under the auspices of the REP-5 project, funded by the European Union. These included in 2009 the installation of over 1800 pre-payment meters in homes and businesses. A demand-side energy efficiency action plan was also drafted and two energy efficiency officers were hired.
