

SolarMax Energy Systems

Nepal smart solar power generation for home use

Overview

How to promote solar energy in Nepal?

The first and most reasonable approach for promoting solar in Nepal is to increase the domestic energy generation. In Nepal, we do not have significant sources of petroleum which is dominating the proportion of modern energy usage in the country.

What is solar power in Nepal?

Solar Power in Nepal: – Solar energy is radiant light and heat from the sun, which has always been used by humans through a series of constantly evolving technologies. Solar radiation and secondary solar resources make up the bulk of the renewable energy available on Earth.

Is solar energy a viable alternative for power generation in Nepal?

“ Nepal receives optimal sunlight of approximately 300 days on average during the year with a total solar radiation of 3.6 – 6.2 kWh / m² / day with an average of 4.7 kWh / m² / day, making solar energy a significant renewable alternative for power generation in Nepal.

How many solar panels are installed in Nepal?

Around 225,000 solar photovoltaic appliances are installed throughout Nepal, with a total contribution of 5.36 MWp. Rapid technological advances in this field, which increase efficiency and significantly reduce costs, have made solar energy attractive to investors.

Is solar PV a solution to energy insecurity in Nepal?

Hence depending nation's majority of electrical sources on a single source is dangerous and can cause catastrophic energy blackout. Solar PV a globally recognized and in trend in later decades is a promising technology which could secure the energy insecurity of Nepal.

How much does solar energy cost in Nepal?

According to a report by The Himalayan Times, the solar resource in Nepal is good enough for the production of electricity at a cost of NRs 4,800 (US\$40) per MWh once the solar industry becomes mature in Nepal, falling to below NRs 3,600 (US\$30)/MWh in 2030. In average the global solar radiation varies from 3.6-6.2 kWh/m² day in Nepal.
