New Energy Site Working Costs

Overview

Are renewable power projects cost-effective?

The addition of 582 gigawatts of renewable capacity in 2024 led to significant cost savings, avoiding fossil fuel use valued at about USD 57 billion. Notably, 91% of new renewable power projects commissioned last year were more cost-effective than any new fossil fuel alternatives.

How do I estimate sitework costs?

Early in a project, a developer may only have conceptual engineering drawings or a site sketch outlining a proposed site development plan. Therefore, to estimate sitework costs, you need to make a calculated judgment about the extent of work required as outlined by that site plan.

How do I estimate sitework & land development costs?

Estimating sitework and land development costs is not an exact science. Development budgets need to be continually refined as a project progresses and new information about a site is uncovered. A real estate consultant with extensive land planning and real estate development experience may also be a good resource in your effort to quantify costs.

What is cost of new entry?

Cost of New Entry is an industry-wide term, used to indicate the current, annualised, capital cost of constructing a power plant. The plant used to estimate CONE is an advanced combustion turbine. CONE is calculated with varying assumptions and methods, depending upon who is calculating and for what purpose.

Are wind and solar construction costs higher than gas-fired construction costs?

As seen below, wind and solar construction costs have been much higher than gas-fired construction costs for the entire timeline shown: 2013 through 2022. The gas-fired power costs are a combination of combined cycle, internal

combustion engine, and turbine technology.

Do overnight costs exclude interest accrued during plant construction and development?

Overnight costs exclude interest accrued during plant construction and development. Technologies with limited commercial experience might include a technological optimism factor to account for the tendency to underestimate the full engineering and development costs for new technologies during technology research and development.

New Energy Site Working Costs

The Real Costs of Site Development

This sample spreadsheet shows the typical cost to turn a piece of vacant land into a buildable lot. These costs vary widely from the low to high values given.
