Nicaragua Australia Battery Energy Storage Project

Overview

Are Australia's large-scale battery energy storage projects attracting federal support?

The volume of large-scale battery energy storage projects under construction in Australia passed that of solar and wind projects combined in 2023 and the trend has intensified this year, with batteries attracting federal support. As coal-fired power plants are shuttered, developers and suppliers are enjoying a battery bonanza.

How much battery energy storage capacity is being built?

The volume of battery energy storage capacity connecting to the grid, being constructed, and reaching final investment decision confirms that thesis. Business intelligence company Rystad Energy has said that almost 4 GW of utility-scale battery energy storage systems (BESS) entered construction in the first nine months of 2024.

Are batteries poised to dominate energy storage?

Yates was convinced batteries were poised to dominate all forms of energy storage, with Buckley musing that might have been the result of their visits to battery producer CATL and power electronics giant Sungrow. Yates, the first CEO of federal government-owned green bank Clean Energy Finance Corporation, has financed energy storage facilities.
