

## SolarMax Energy Systems

# Nickel-zinc flow battery

## Overview

---

Here we focus on aqueous Zn-Ni battery chemistry to design a semi-solid flow battery that demonstrates both high energy and power densities.

With the increase of energy consumption and greenhouse gas emission, the role of renewable energy sources such as solar and wind energy has.

We have developed ZnO and Ni(OH)<sub>2</sub> flowable electrodes with high power and energy densities and negligible energy loss during pumping for Zn-Ni semi-solid flow battery (SSFB), by combining both electrochemistry knowledge and understanding of the.

This work is supported by Eni. Research described in this paper Ni L-edge XANES spectra were collected at the Canadian Light Source, which is supported by the University of.
