

SolarMax Energy Systems

Nordic export of energy storage products

Overview

How many battery-based energy storage systems are in the Nordics?

To date, more than 200 MW of battery-based energy storage systems are operational in the Nordics. In addition, recent announcements and projects under construction amount to more than 450 MW in Sweden and Finland combined, with the pipeline in Sweden accelerating and already accounting for more than two-thirds of the total.

Why is battery-based energy storage important in the Nordics?

The region is striving to become Europe's clean energy hub and is gaining leadership in the green transition of industry. Battery-based energy storage is a vital addition to the Nordics' energy system to integrate an even higher share of renewable energy from abundant wind and hydropower.

Why do we need hydro reservoirs in the Nordic region?

The Nordic region benefits from large hydro reservoirs that provide excellent and cost-effective energy storage options, which are already being efficiently utilised. Meeting growing future flexibility needs with a changing energy mix will require supplementing hydro reservoirs with batteries or hydrogen-based fuels.

Is energy storage a good investment in Germany?

In Germany, on the other hand, energy storage can yield attractive revenues from FCR, aFRR, and energy trading on the wholesale markets. In 2022, Germany joined the PICASSO platform, so storage assets participate in an overhauled automatic Frequency Restoration Reserve market.
