

## SolarMax Energy Systems

# One megawatt energy storage power station export

## Overview

---

How many kilowatt-hours of green power can a China Energy Storage Station produce?

It is estimated that the station can export 1.2 million kilowatt-hours of green power per day. An energy storage station plays a key role in building new-type power systems and supporting realization of China's "dual carbon" goals of peaking carbon dioxide before 2030 and reaching carbon neutrality before 2060.

How many megawatts does a GBA Power Station have?

Covering an area of 58 mu (3.87 hectares), an equivalent to five and a half standard football pitches, the power station has a total installed capacity of 300 megawatts/600 megawatt-hours, occupying one-fifth of the total installed capacity of new-type energy storage in the GBA.

Where is the largest energy storage station in China?

The Baotang energy storage station in Foshan, South China's Guangdong Province, the largest of its kind in the Guangdong-Hong Kong-Macao Greater Bay Area (GBA), is now in operation. It is the largest grid-side individual energy storage station built in one continuous construction period.

How will a pumped storage power plant contribute to the energy transition?

The company is making a significant contribution to the energy transition and is continuing its corporate transformation towards more renewable energy generation. By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany.
