

SolarMax Energy Systems

Operational price of large-scale energy storage projects

Overview

For a typical 100 MW/400 MWh utility-scale installation in Europe, hardware and equipment costs currently range from €40 to €60 million. However, these costs are expected to decrease by 8-10% annually as manufacturing efficiency improves and supply chains mature. Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

Are recycling and decommissioning included in the cost and performance assessment?

Recycling and decommissioning are included as additional costs for Li-ion, redox flow, and lead-acid technologies. The 2020 Cost and Performance Assessment analyzed energy storage systems from 2 to 10 hours. The 2022 Cost and Performance Assessment analyzes storage system at additional 24- and 100-hour durations.

How will a collaborative approach affect battery storage costs?

This collaborative approach has accelerated manufacturing improvements and cost reductions. Current projections indicate that utility-scale battery storage costs will continue to decrease by 8-10% annually through 2030, driven by increased production volumes and ongoing technological innovations.

Which energy storage system is best designed for large-scale bulk energy

storage?

storage (CAES) systems are best designed for large-scale long duration bulk energy storage. The following sections introduce technologies competing in the long duration energy storage market.1.1.1 Pumped Hydro StoragePHS h.

Do projected cost reductions for battery storage vary over time?

The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time. Figure ES-1 shows the suite of projected cost reductions (on a normalized basis) collected from the literature (shown in gray) as well as the low, mid, and high cost projections developed in this work (shown in black).
