

**SolarMax Energy Systems**

# **Overclocking three energy storage products**

## Overview

---

Does Over-clocking save energy?

This is roughly a 12% increase in energy per operation per upgrade: While building multiple machines makes better use of a limited energy supply, over-clocking allows for reduced space and wiring requirements when time or compact construction are more important or energy is plentiful.

Is Hyperblock III a good choice for utility-scale battery storage?

With up to 5MWh battery capacity, HyperBlock III can offer a 34.5% increase in energy density, serving as an ideal choice for utility-scale battery storage. HyperStrong's utility-scale ESS solutions help mitigate the fluctuations in renewable energy and alleviate their impact on the grid.

How many overclocks does A multiblock have?

Amperage of these hatches does not matter, you must have TWO of them. For multiblocks, overclock refers to their ability to run at a higher voltage tier than their energy hatches, given enough amps. If your hatches total 4A you get one overclock, and if they total 16A you get two overclocks.

How do you overclock A multiblock?

For multiblocks, overclock refers to their ability to run at a higher voltage tier than their energy hatches, given enough amps. If your hatches total 4A you get one overclock, and if they total 16A you get two overclocks. Doing this before EV requires the use of two hatches (each supporting 2A), and therefore will also involve a Recipe Tier Skip.

How do I Tier skip and overclock A multiblock?

If you do not want tier skip OR overclock, you can share a single 2A energy hatch between two multiblocks to give each one 1A. Post-EV, if you want tier skip AND overclock, then share a pair of 4A/16A hatches between two multiblocks. This fulfills the “two hatch” requirement for recipe tier skip and

provides 4A or 16A to each multiblock.

What is parallel overclocking?

As parallel is more efficient than normal (imperfect) overclocking, parallel is applied to the recipe before overclocking. Subtick Overclocking is the mechanism of being able to overclock a multiblock past 1 tick (0.05s) limit.
