PV downgraded component prices

Overview

Why are PV module prices falling in China?

Although raw material costs in China are slowly stabilizing again, PV module prices continue to decline, as inventory levels remain very high. For the fifth month in a row, module prices fell further by around 6% on average.

Why are module prices falling?

The ongoing decline in prices has led to an overall average reduction of 25% across all module technologies since the start of the year. Even as raw material costs in China stabilize, high inventories continue to drive down module prices. Manufacturers and wholesalers are grappling with recurring losses in their day-to-day operations.

Does pvxchange offer a price index?

Since 2009, pvXchange has provided a unique price index for the European market, which has become an invaluable industry tool. Today, it is hard to imagine the industry without our price index, trend data, and in-depth analysis and commentary. Please find here a collection of all available market comments: [Market Analysis](#)
