

SolarMax Energy Systems

Pakistan Photovoltaic Control Container

Overview

Is solar PV a viable long-term solution to Pakistan's energy needs?

The country has been facing a significant energy deficit for the past decade, with power shortfalls standing at 5 GW⁸ and load shedding across the country varying between 5 to 12 hours a day, with rural areas bearing the brunt of load shedding. Solar PV could be a viable and cost-effective long-term solution to meet Pakistan's energy needs.

Why is classification of PV equipment not possible in Pakistan?

Classification of equipment into 'tiers' is currently not possible due to the lack of quality standards in Pakistan. The availability of high-quality products and services is limited to a handful of companies working in the country's PV market.

Does Pakistan have a high-quality PV system?

Pakistan has a huge PV potential and all the necessary conditions for its implementation: high radiation yield, a regulatory framework and financing instruments that support its development. However, the level of awareness of quality of PV is very low and customers are still not aware of the benefits of high-quality products.

Can You import batteries as a PV system design?

However, the import of batteries, even when imported as part of a PV system design, can be quite challenging, and the securing of the tax exemption can never be guaranteed. What do you see as your main need in accessing markets for solar products?

What do you see as your main opportunity?

.

What standards have been adopted for crystalline silicon crystalline

photovoltaic (PV) modules?

26 To be implemented soon. The following standards have already been adopted: IEC: 61215 for crystalline silicon terrestrial photovoltaic (PV) modules - design qualification and type approval. IEC: 60529 for degrees of protection provided by enclosures (IP Code).
