

## SolarMax Energy Systems

# Panama Ecological Agriculture Photovoltaic Energy Storage System

Sample Order  
UL/KC/CB/UN38.3/UL

## Overview

---

What is the goal of the Panamanian solar thermal strategy?

The goal of the Panamanian solar thermal strategy is to deploy 1 million square meters of solar thermal technology throughout the country by 2050. Termosolar Panama is part of this wider effort to move away from fossil fuels.

Are agrivoltaic systems a solution to agricultural lands and forest invasion?

The rate of solar power generation is increasing globally at a significant increase in the net electricity demand, leading to competition for agricultural lands and forest invasion. Agrivoltaic systems, which integrate photovoltaic (PV) systems with crop production, are potential solutions to this situation.

Could solar hot water heating help reduce deforestation in Panama?

Solar hot water heating could help Panama reduce its reliance on fossil fuels, particularly liquefied petroleum gas, which is used to heat most of the over 30 million litres of hot water Panamanians use daily. Alongside countering deforestation, this could also help Panama cut its reliance on fossil fuels.

What are agrivoltaic systems?

Agrivoltaic systems can boost electricity generation efficiency and capacity, as well as the land equivalent ratio. They also generate revenue for farmers and entrepreneurs through the sale of electricity and crops. Therefore, these systems have the potential to sustain energy, food, the environment, the economy, and society.

Can agrivoltaic systems implement an agricultural area without agricultural pre-plans?

Moreover, with several conventional solar power plant projects currently underway around the world, an expanding trend is anticipated. As a result, this article offers practical advice for agrivoltaic systems on how to implement an agricultural area under ground-mounted PV power systems without

agricultural pre-plans.

Can agrivoltaic systems improve food security?

The productivity of agrivoltaic systems will provide stability and self-sufficiency in food and energy for areas experiencing food insecurity and/or energy shortages (Agostini et al., 2021; Randle-Boggis et al., 2021; Ketzer, 2020).
