

## SolarMax Energy Systems

# Photovoltaic and energy storage business models

## Overview

---

Using the framework, we identify 28 distinct business models applicable to modern power systems. We match the identified business models with storage technologies via overlaps in operational requirem.

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is tradition-ally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

Are energy storage business models fully developed?

E Though the business models are not yet fully developed, the cases indicate some initial trends for energy storage technology. Energy storage is becoming an independent asset class in the energy system; it is neither part of transmission and distribution, nor generation. We see four key lessons emerging from the cases.

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

What are the different types of energy business models?

This research focuses on demand response and energy management systems, electricity and thermal storage, and solar PV business models. The passage classifies the revenue streams, customer segments, electricity services provided, and distributed energy resources leveraged for 144 business models.

Are energy storage projects ready for a bright future?

In anticipation of a bright future, the first projects with energy storage are

being set up. We have analyzed some of these cases and clustered them according to their position in the energy value chain and the type of revenues associated with the business model.

What are utility-scale PV business models?

Utility-scale PV business models are primarily focused on the establishment of long-term power purchase agreements (PPAs, also known as commodity sales). These business models are structured as "utility-scale PV finance and installation". Figure 16 provides a general overview.
